MQFP

Metric Quad Flat Pack Packages (MQFP)

Amkor's MQFP packages allow IC packaging engineers and systems designers the flexibility of growing or shrinking IC package size based upon application need. Amkor uses the most up-to-date materials and processes along with advanced equipment, to ensure successful, reliable performance of our IC devices. A complete line of MQFP packages are available to provide security, convenience and success.

Thermal Enhancement

Some designs and applications require an added margin of thermal performance (power). Amkor's easy and cost-effective solution is a heat spreader. This optional embedded thermal aid improves Theta JA by as much as 15% (without external heat sinks or fans) by supplementing the heat dissipation path from the IC chip to the PCB.

Applications

Amkor's MQFP line is adapted to meet the increasing challenges of advanced Digital Signal Processors (DSP), microcontrollers, ASIC, video DAC, gate arrays, logic, multimedia chip sets and other technologies. These packages fill application needs in consumer, commercial, office, automotive, PC, industrial and other product areas.
